

GLS Romania supports the Health System

Since the beginning of the pandemic, GLS Romania has supported the health system with over 172,000 euros. The last act of this support consisted in the acquisition of a fully equipped bed for the Intensive Care Unit of the County Clinical Emergency Hospital of Sibiu.

In addition to reliable and high quality parcel delivery services, GLS Romania shows social responsibility and supports the health system which was fully challenged during the pandemic. In March, a fully equipped 4-section ICU bed with 4 motors, ventilation device, vital functions monitor, docking station for 6 injectors and infusion pumps was purchased for the Intensive Care Unit of the County Clinical Emergency Hospital of Sibiu to help it give an extra chance to life to people who are going through critical moments.

This acquisition completes the help offered on several other occasions to the health system by GLS Romania. In total, this support amounts to 172,500 euros since the beginning of the pandemic.

"This pandemic took us all by surprise and made us more aware of the care we must take for ourselves and for those around us. Our wish is to provide all the necessary support to increase the chances of success in the fight for life in the Intensive Care Unit, where for more than a year the medical staff has been fighting continuously to save lives and provide the necessary support. We are glad we can give a hand to the ICU of the County Clinical Emergency Hospital of Sibiu by purchasing a fully equipped bed.

We hope it will serve to increase the life chances for those who need it" says Diana Pană, Marketing Coordinator of GLS Romania.

GLS Group

GLS Group offers reliable and high quality parcel delivery services to over 240,000 customers, complemented by shipping and express delivery services. "Quality leader in parcel logistics" is GLS' guiding principle. Through wholly owned companies and partnerships, GLS Group covers 40 countries and is connected globally through contractual agreements. Through its terrestrial network, GLS is one of the largest providers of parcel delivery services in Europe. GLS Group also operates through wholly owned subsidiaries in Canada and on the west coast of the United States. The GLS network consists of more than 70 central and regional transshipment points and approximately 1,400 warehouses supported by over 28,000 delivery vehicles and 4,000 trucks for the main lines. GLS has around 19,000 employees. In the fiscal year 2019/2020, GLS generated revenues of 3.6 billion euros and delivered over 667 million shipments.
